Project Configuration ?

Configure the name of your new project and at what URL(s) you will be running it.

Project Name

dovir5/100

This will be displayed to users when logging in via your website

Site URL(s)

http://localhost:4000

Only the URL origin is needed, not the path to any specific pages.

Create Project +

Wee need to add url , you can use localhost:4000 , we can change it later. Or you can input your domain in here.

Site URLs

Only the URL origin is needed, not the path to any specific pages. URL must be '[http | https]://<host>[:port]'. Glob patterns are supported. Multiple URLs are supported when separated by a comma.

https://yourdomainname.com

Add +

http://localhost:4000

Project: dovir

Application IDs

Client ID

f47ee816-0518

The Client ID is used by TinaCloud to connect to your repository. You will need to use this as an environment variable when setting up Tina.

Site URLs

http://localhost:4000

**Build settings** ⓘ [Configuring builds](#)

If your project uses a static site generator or build tool, set the build instructions for Cloudflare.

**Framework preset** ⓘ

Jekyll

**Build command** ⓘ

jeekyll build

**Build output directory** ⓘ

/ \_site

> Root directory (advanced)

▼ Environment variables (advanced)

Add variables to be used during build time for Production and Preview environments. Variables for each environment can be changed separately later.

| Variable name  |   | Value |   |
|----------------|---|-------|---|
| TINA_CLIENT_ID | = |       | × |
| TINA_TOKEN     | = |       | × |
| TINA_BRANCH    | = | main  | × |

+ Add variable

← Change repository

Save and Deploy

And insert this configuration:

TINA\_CLIENT\_ID="Copy from tina client id"

TINA\_TOKEN="Copy and paste from tina token"

TINA\_BRANCH="main"

**Tokens**

**Read-only tokens** allow data fetching at runtime without the need for the local GraphQL server. **Search tokens** allow reading and updating the search index.

For more information, check out [the docs for read-only tokens](#) or [the docs for search](#).

+ New Token

| Content (Readonly)                                                                                                                                                                    | Type                | Branches |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|----------|
|  Last used: never                                                                                  | Content (Read-only) | *        |
|  1e1f1a7d8388-  |                     |          |

Delete Token

To generate new token, open on tina cms dashboard, select your project and push + new token button, next you can copy new token you have generate and paste into cloudflare TINA\_TOKEN

**Project: dovir**

**Application IDs**

**Client ID**

 f47ee816-0518-

The Client ID is used by TinaCloud to connect to your repository. You will need to use this as an environment variable when setting up Tina.

**Project Setup Checklist – 2 of 4**

Click on the steps below to track your progress.

- ✓ **Create the Project**  
Create a project in the TinaCloud dashboard.  
[Learn More →](#)
- ✓ **Set up your site schema**  
Initialize tina on your site locally, and push it up to git.  
[Learn More →](#)

To check your application ID open on tina cloud dashboard – your project – overview – then copy your client id in to cloudflare TINA\_CLIENT\_ID

## Site URLs

Only the URL origin is needed, not the path to any specific pages. URL must be '[http | https]:// <host>[:port]'. Glob patterns are supported. Multiple URLs are supported when separated by a comma.

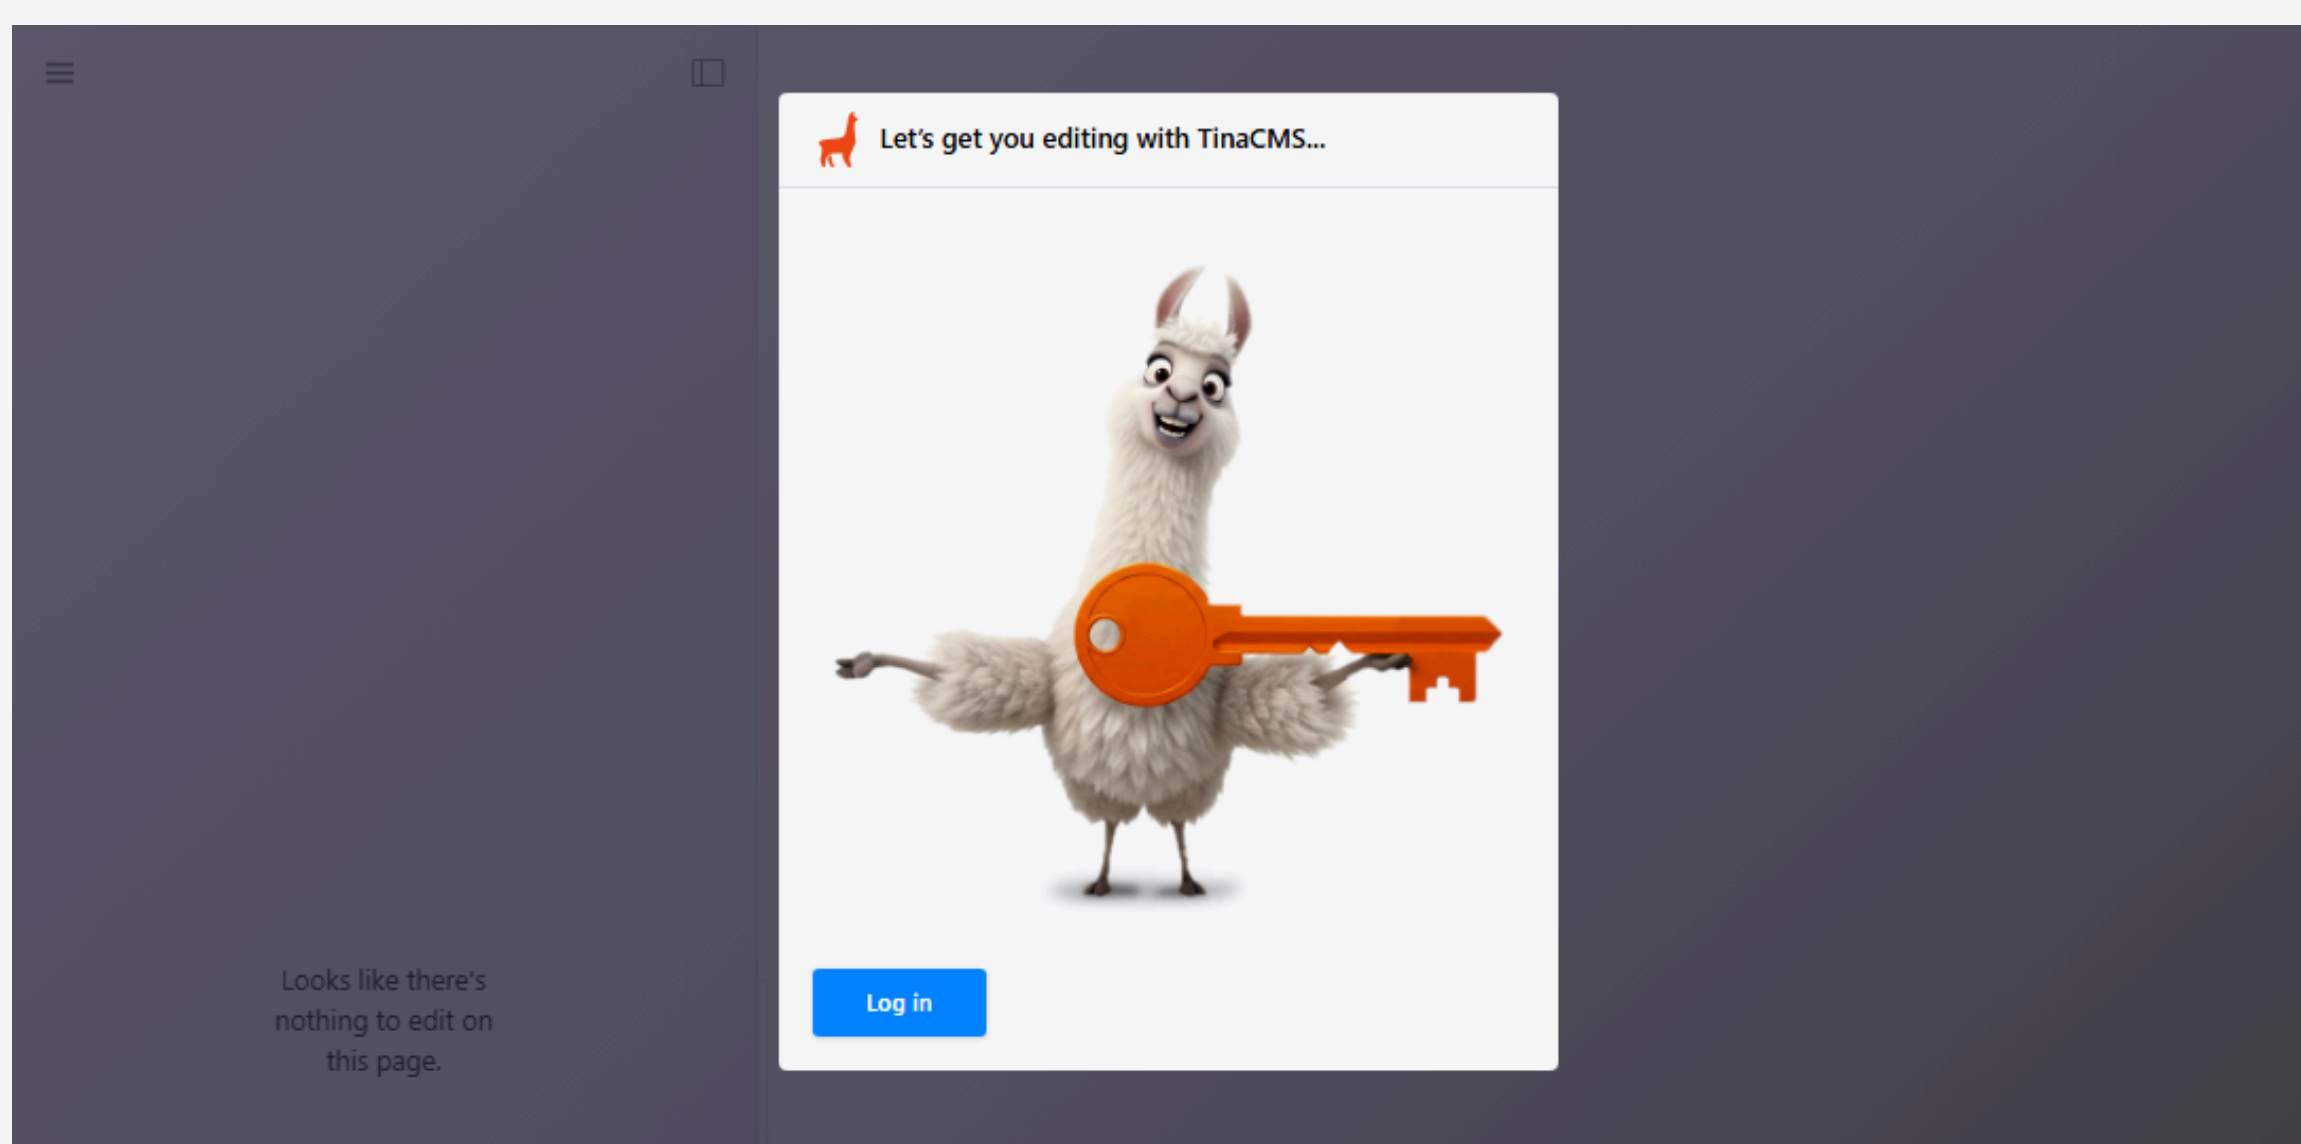

And you can also add your domain and make sure your domain have integrate with tina cloud cms – open on tina cloud dashboard, and insert your domain here.

## Site URLs

[Configure](#)

|                                                                                     |                                                                     |                                |
|-------------------------------------------------------------------------------------|---------------------------------------------------------------------|--------------------------------|
|  | <a href="http://localhost:4000">http://localhost:4000</a>           | <a href="#">Edit with Tina</a> |
|  | <a href="https://yourdomainname.com">https://yourdomainname.com</a> | <a href="#">Edit with Tina</a> |

Now, after you have deploy on cloudflare pages and integration your API Tina cloud with cloudflare you can access your backend admin area access yourdomain/admin , and see the magic !!

Congratulations !! You have success build your backend CMS with Tina Cloud !! click login with your account to login in to your backend CMS.
